

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. – 15. (Canceled)

16. (Currently Amended) A method of handling reminders in a handportable wireless communication terminal comprising a limited memory storing a reminder application, and not storing a calendar application, wherein a reminder is an electronic message which includes a reminder time and date and a reminder text which reminds a user of the terminal that an action should be taken as indicated in the text, and wherein the reminder application causes the terminal to generate an alarm alerting a user of the terminal that the action should be taken when the time and date of any reminder is reached, comprising:

Manually entering characters via an alphanumeric key pad of the handportable wireless communication terminal into a text editor of the handportable wireless communication terminal for providing the reminder text;

entering time information via the alphanumeric key pad into a time entry for setting the reminder time;

providing real time clock information from a clock application;

comparing the time information with the real time clock information; and

alerting a user of the terminal with an alarm when the real time clock has reached the reminder time and date; and

~~transmitting the reminder to a remote second communication terminal via a wireless communication network.~~

17. (Previously Presented) A method according to claim 16, wherein the alerting with the alarm comprises display of the reminder text.

18. (Currently Amended) A handportable wireless communication terminal, comprising:

a control unit[.];

a user interface including a display means and an alphanumeric key pad ~~text input means~~ with said user interface being controlled by the control unit for generating reminders wherein a reminder is an electronic message which includes a reminder time and date and a reminder text which reminds a user of the terminal that an action should be taken as indicated in the text and which causes the terminal to generate an alarm alerting a user of the terminal that the action should be taken when the time and date is reached; and

memory storing a clock application controlled by the control unit and having a clock function, and storing a reminder application which the display can present, the reminder application including a text editor in which the user through the user interface enters the reminder text, and a time entry in which the user through the user interface enters the date and the time for the reminder at which time and date the reminder text is displayed by the display and an alert unit that generates an alarm which alerts the use when the clock reaches the entered date and time for the reminder[.];

~~wherein the reminder application allows the user to transmit the reminder to a remote second communication terminal via a wireless communication network, and~~

wherein the handportable wireless communication terminal does not provide a calendar application.

19. (Currently Amended) A handportable wireless communication terminal according to claim 18, wherein the clock application provides real time clock information to the reminder application and the reminder application displays a reminder note when the real time clock has reached the reminder time.

20. (Currently Amended) A handportable wireless communication terminal according to claim 18, wherein the reminder application provides the user access to add new reminders, view all existing reminders and erase existing reminders.

21. (Currently Amended) A handportable wireless communication terminal according to claim 18, wherein the reminder application allows the user to transmit the reminder to a remote second communication terminal via a wireless communication network, wherein the reminder application upon receiving instructions to send a reminder requests the user to enter a phone number of the second communication terminal which is to receive the reminder.

22. (Currently Amended) A handportable wireless communication terminal according to claim 21, wherein the reminder application allows the user to search for the phone number of the second communication terminal in an internal phone number database of the terminal.

23. (Currently Amended) A handportable wireless communication terminal according to claim 21, wherein the reminder application allows the user to inspect a reminder received from the remote second communication terminal via a wireless communication network.

24. (Currently Amended) A handportable wireless communication terminal according to claim 21, wherein the reminder application furthermore allows the user to save or discard a reminder received from the remote second communication terminal.

25. (Currently Amended) A handportable wireless communication terminal according to claim 21, wherein the reminders are transferred via the wireless communication network included in a message according to ~~the Smart Messaging Specification~~ a smart messaging specification.

26. (Currently Amended) A handportable wireless communication terminal according to claim 22, wherein the reminders are transferred via the wireless communication network included in a message according to ~~the Smart Messaging Specification~~ a smart messaging specification.

27. (Currently Amended) A handportable wireless communication terminal according to claim 23, wherein the reminders are transferred via the wireless communication network included in a message according to ~~the Smart Messaging Specification~~ a smart messaging specification.

28. (Currently Amended) A handportable wireless communication terminal according to claim 24, wherein the reminders are transferred via the wireless communication network included in a message according to ~~the Smart Messaging Specification~~ a smart messaging specification.

29. (Currently Amended) A handportable wireless communication terminal according to claim 25, wherein the reminders are transferred via the wireless communication network included in a message according to ~~the Smart Messaging Specification~~ a smart messaging specification.

30. (Currently Amended) One or more computer readable media in a wireless mobile communication terminal, ~~the computer readable media~~ storing computer executable instructions to perform a method of handling reminders in [a] the wireless mobile communication terminal, wherein a reminder is an electronic message which includes a reminder time and date and a reminder text, said method comprising:

receiving characters input by a user into a text editor of the wireless mobile communication terminal via an alphanumeric key pad of the wireless mobile communication terminal for providing the reminder text, said text editor stored in a limited memory of the wireless mobile communication terminal, wherein said limited memory stores a reminder application, while not storing a calendar application;

receiving time information input by the user into a time entry for setting the reminder time;

comparing the time information with a real time clock of the wireless mobile communication terminal; and

alerting a user of the wireless mobile communication terminal with an alarm when the real time clock has reached the reminder time and date, thereby reminding a user of the wireless mobile communication terminal that an action should be taken as indicated in the text.

31. (Currently Amended) A wireless mobile communication terminal configured to perform a method of handling reminders ~~in a mobile communication terminal~~ therein, wherein a reminder is an electronic message which includes a reminder time and date and a reminder text, comprising:

an alphanumeric key pad wherein a user can input characters;

means for receiving characters input by a user via the alphanumeric key pad into a text editor of the wireless mobile communication terminal for providing the reminder text, said text editor stored in a limited memory of the wireless mobile communication terminal, wherein said limited memory stores a reminder application, while not storing a calendar application;

means for receiving time information input by the user into a time entry of the wireless mobile communication terminal for setting the reminder time;

means for comparing the time information with a real time clock of the mobile communication terminal; and

means for alerting a user of the terminal with an alarm when the real time clock has reached the reminder time and date, thereby reminding a user of the terminal that an action should be taken as indicated in the text.

32. (New) A method according to claim 16, comprising the step of transmitting the reminder to a remote second communication terminal via a wireless communication network

33. (New) A method according to claim 32, wherein the alerting with the alarm comprises display of the reminder text.

34. (New) A handportable wireless communication terminal according to claim 18, wherein the reminder application allows the user to transmit the reminder to a remote second communication terminal via a wireless communication network.

35. (New) A handportable wireless communication terminal according to claim 34, wherein the clock application provides real time clock information to the reminder application and the reminder application displays a reminder note when the real time clock has reached the reminder time.

36. (New) A handportable wireless communication terminal according to claim 34, wherein the reminder application provides the user access to add new reminders, view all existing reminders and erase existing reminders.

37. (New) A handportable wireless communication terminal not having a calendar application that provides for display of series of pages showing dates, where the terminal comprises:

- a reminder application for notifying the user about the occurrence of one or more timed events, where each timed event has an associated reminder text label and date and time for the reminder;

- a clock application controlled by the control unit for providing clock information to the reminder application;

- a user interface including a display and an alphanumeric key pad; and

- a processing unit,

the reminder application, when activated, providing a text editor window into which the user through the user interface enters a reminder text label, and a time entry window in which the user through the user interface enters a date and time associated with the reminder text label, the processing unit adapted to execute time comparison between the clock information and the time set for said events, and to control the issuance of a reminder alert to said intended user once the clock information from the clock application matches the time set for one of said events.
